INSTRUCTIONS —

This examination is in multiple choice format; the questions are in this Exam Booklet and the answers should be placed on the "Test Scoring Answer Sheet" which must be turned in and will be machine graded.

On the Test Scoring Answer Sheet, using a soft pencil, enter the following data (in the appropriate places):
your name,
your OSC student (NOT Social Security) number,
and course number (30022101);
darken the appropriate bubbles under the entries, making dark black marks which fill the bubbles.

You may use a set of molecular models, but no other aids, during the exam.

Answer all questions; they are worth 3.79 points each.

You have 50 minutes. Good luck!
1. Select the principal product of the following reaction.

\[
\text{Br} \quad \text{N-bromosuccinimide (NBS)} \quad \text{hv, CCl}_4 \text{ solvent}
\]

\[\text{Br} \quad \text{Br} \quad \text{Br} \quad \text{Br} \quad \text{Br}\]

(a) (b) (c) (d)

2. Rank the following free radicals in order to decreasing stability (most stable first).

(a) vinylic>methyl>primary>secondary>tertiary>allylic,
(b) allylic>tertiary>secondary>primary>methyl>vinylic,
(c) allylic>methyl>primary>secondary>tertiary>vinylic,
(d) tertiary>secondary>primary>allylic>vinylic>methyl

3. What will be the major product which results from the following series of reactions?

\[
\text{Br} \quad 1) \text{Li} \\
\quad 2) \text{CuI} \\
\quad 3) \text{Br}
\]

(a) (b) (c) (d) (e)
In questions 4-10 select the mechanism(s) [there may be more than one] that fit the description provided, from the list of mechanisms below. The substrate would be an alkyl halide or alkyl tosylate.

List of mechanisms: (a) S_N1, (b) S_N2, (c) E1, (d) E2, (e) S_N1 & S_N2, (f) E1 & E2, (g) S_N1 & E1, (h) S_N2 & E2

4. This reaction mechanism is characterized by inversion of stereochemistry at a stereogenic reaction center and exhibits second-order kinetics.

5. This reaction mechanism is characterized by partial or complete racemization at a stereogenic reaction center and exhibits first-order kinetics.

6. This reaction mechanism is characterized by a carbocation intermediate.

7. This reaction mechanism is characterized by the requirement that the leaving group and a hydrogen on an adjacent carbon be periplanar and preferably anti-periplanar.

8. This reaction mechanism is favored by 3° substrates, high temperatures, and a strong base.

9. This reaction mechanism is favored by 3° substrates, low temperatures, polar solvents, and low concentrations of very weak bases.

10. These mechanisms will both operate if a 2° substrate is reacted with a high concentration of strong base/nucleophile.

11. Which of the following mechanism types is(are) likely in this reaction: CH₃I + KOH $\rightarrow$ CH₃OH + KI
   
   (I) S_N1, (II) S_N2, (III) E1, (IV) E2

   (a) I&II, (b) III&IV, (c) I, (d) II
12. What would be the major product(s) that would form from reaction of (S)-2-bromohexane with acetate ion (CH₃COO⁻) at room temperature if the reaction exhibits second order kinetics?

(a) I, (b) II, (c) III, (d) IV, (e) V, (f) I&II; racemic mixture, (g) I&II; unequal amounts, (h) III, IV&V; III > IV > V, (i) III, IV&V; V > III > IV

13. Rank the following substrates in order of decreasing reactivity in an S_N2 reaction (most reactive first, least reactive last).

(I) (CH₃)₃C-Br, (II) CH₃Br, (III) CH₃CH₂Cl, (IV) CH₃CH₂Br

(a) I > II > III > IV, (b) IV > I > II > III, (c) IV > III > II > I, (d) I > IV > II > I, (e) II > IV > III > I

14. In which of the solvents listed below would the following S_N2 reaction be fastest?

CH₃(CH₂)₃Br + Na⁺N₃⁻ → CH₃(CH₂)₃N₃ + Na⁺Br⁻

(a) hexane, (b) methanol, CH₃OH, (c) diethyl ether, (C₂H₅)₂O, (d) acetonitrile, CH₃CN

15. If a reaction proceeds through an S_N1 mechanism and the concentrations of both the substrate and nucleophile are doubled, the reaction rate will

(a) remain the same. (b) double. (c) triple. (d) quadruple. (e) None of the previous answers is correct

16. For the following reaction carried out in aqueous ethanol, select the more reactive nucleophile in each pair: CH₃Br + Nu: → CH₃-Nu + Br⁻

Nucleophiles
First pair: I⁻ and Cl⁻. Second pair: HS⁻ and H₂S.

(a) I⁻ & HS⁻, (b) Cl⁻ & H₂S, (c) I⁻ & H₂S, (d) Cl⁻ & HS⁻
17. \((\text{CH}_3)_3\text{C-Br} + \text{H-C}=\text{C}^-\text{Na}^+ \rightarrow \) major product(s)

(a) \((\text{CH}_3)_3\text{C}=\text{C-H} + \text{NaBr}\),  (b) \((\text{CH}_3)_2\text{C}=\text{CH}_2 + \text{H-C}=\text{C-H} + \text{NaBr}\),
(c) \((\text{CH}_3)_3\text{C}^-\text{Na}^+ + \text{H-C}=\text{C-Br}\),  (d) There would be no reaction.
(e) None of the above answers.

18. The structure of the transition state for the reaction of hydroxide ion with methyl iodide is best represented by

- (A) \(\text{HO}---\text{CH}_3\text{--I}\)
- (B) \(\text{HO}--\text{CH}_3\text{--I}\)
- (C) \(\text{HO}--\text{CH}_3\text{--I}\)
- (D) \(\text{HO}--\text{CH}_3\text{--I}\)

19. Which of the alkyl halides shown below would be most likely to give a rearranged product on solvolysis (reaction with solvent acting as nucleophile) in aqueous ethanol?

- (A) \(\text{H}_3\text{C-C-CH}_3\)
- (B) \(\text{H}_3\text{C-C-CH}_2\text{CH}_3\)
- (C) \(\text{H}_2\text{Br}\text{C-C-CH}_3\)
- (D) \(\text{H}_3\text{C-C-CHCH}_3\)
- (E) \(\text{H}_3\text{C-C-CH}_3\)

The following two questions consist of a statement followed by the connecting word because followed by a reason: <statement> because <reason>. In each question choose the correct description of the statement and the reason from the list below:

(a) The statement and the reason are both factually true, and the reason is the correct explanation of the statement.
(b) The statement and the reason are both factually true, but the reason is not the correct explanation of the statement.
(c) The statement is true and the reason is false.
(d) The statement is false and the reason is true.
(e) Both the statement and reason are false.
20. Reaction of a bulky base such as \((\text{CH}_3)_3\text{CO}^-\text{K}^+\) with secondary alkyl halides gives predominantly E2 elimination rather than S_n,2 substitution because the transition state for S_n,2 reaction is more sterically hindered than that for E2 reaction.

21. S_n,2 reactions of the type \(\text{RBr} + \text{Na}^+\text{OH}^- \rightarrow \text{ROH} + \text{Na}^+\text{Br}^-\) generally go slower in a solvent like dimethyl sulfoxide (DMSO) than in a solvent like ethanol because dimethyl sulfoxide can solvate cations well but cannot solvate anions very well.

22. Which of the following nuclei does not have a magnetic moment, and is, therefore, not NMR active?
(a) \(^1\text{H}\), (b) \(^{12}\text{C}\), (c) \(^{13}\text{C}\), (d) \(^{19}\text{F}\)

23. The NMR signal from a proton that has three proton neighbors, equivalent to each other but different from itself, will be split into a
(a) doublet. (b) triplet. (c) quartet. (d) quintet. (e) sextet.

24. How many signals would the compound to the right give in a \(^{13}\text{C}\) NMR spectrum?
(a) 1, (b) 2, (c) 3, (d) 4, (e) 5, (f) 6, (g) 7, (h) 8

25. How many signals would the compound to the right give in a proton NMR spectrum?
(a) 2, (b) 3, (c) 4, (d) 5, (e) 6

For questions 26-27 consider the following compound: \(\text{H}_3\text{C}–\text{O}–\text{CH}_2–\text{O}–\text{CH}_3\)

26. How many signals will appear in the proton NMR of this compound?
(a) 1, (b) 2, (c) 3, (d) 4, (e) 5, (f) 8

27. Which protons would appear furthest downfield?
(a) \(\text{CH}_3\) on left, (b) \(\text{CH}_2\), (c) \(\text{CH}_3\) on right.
In questions 28-30 match the broadband decoupled carbon-13 NMR data given in the question with one of the structures shown below:

28. Signals at the following $\delta$ values (ppm downfield from TMS): 68.2, 40.5, 29.9, 26.1, 26.9.

29. Signals at the following $\delta$ values (ppm downfield from TMS): 132, 27, 16.

30. Signals at the following $\delta$ values (ppm downfield from TMS):

In questions 31-33 match the proton NMR data given in the question with one of the structures shown below:

31. Signals at the following $\delta$ values (ppm downfield from TMS): 1.08(triplet), 2.07(quintet), 4.23(triplet), 10.97(singlet).

32. Signals at the following $\delta$ values (ppm downfield from TMS): 1.05(triplet), 2.13(singlet), 2.47(quartet).

33. Signals at the following $\delta$ values (ppm downfield from TMS): 2.62(triplet), 3.40(singlet), 3.62(triplet).
